

CLEANING/MAINTENANCE OF SHOWER SCREENS

Congratulations on purchasing your Showerama Shower screen. To keep your screen looking sparkling and new a few general cleaning procedures should be followed.

As mildew thrives in damp, unventilated areas, glass and frame should be wiped down after each use with a soft cloth or towel. Do not allow water to remain on the glass or metal sections for long periods of time. For general cleaning of the shower screen, we recommend that a solution of equal parts of vinegar or methylated spirits and water be used which should assist in the removal of stubborn deposits of limescale. Harsh abrasives or general purpose cleaning agents with a high bleach content should not be used as this can burn the glass. Do not use anything abrasive on the powder coated or anodised frame, just wipe down with a soft damp cloth.

Showerama Bathroom Polish is recommended for a more regular maintenance which helps clean and polish the glass surface. Great also for your poly marble vanity tops which, when polished with a soft cloth, will bring it back to a brilliant shine. Showerama Bathroom Polish is available at leading stockists.

A professional treatment or protector can be applied to new or existing shower screens. Simply rinse down and wipe with a soft cloth after use. For a maintenance free screen contact your representative or call our office on (07) 3888 1222 for more information.

Showerama endeavours to make sure that every screen is delivered to you in perfect condition and with a little care and attention you can make sure the condition is maintained throughout its lifetime.
